## AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0027] with the following amended paragraph. Applicants note that the amendment, which is formal in nature, does not introduce new matter.

With regard to both embodiments described a motor may be connected to the apparatus in order to rotate the respective members 6 or 44 between open and closed positions. With regard to the first embodiment a motor may be attached to either one or both of rods or pins 20 and 22. In the second embodiment of FIG. 3, a-motor 85 may be attached accordingly to the rods 67 and 69 connected to legs 76 and 78 so that rotation of the rods or pins rotate the frame 44 between open and closed positions. The motor may include an electronic circuit that has an infrared receiver so that infrared signals may be sent from a remote control unit to control a motor to operate the apparatus. Hence, rotation of the members 6 or 44 can be initiated and stopped when the product is in the desired position.
